### **ABSTRACT**

Nylon-derived flexible dentures are an excellent alternative to conventional way of treating microstomia. Thermoplastic resins not only provides excellent comfort and aesthetics but also adapt to the constant flexibility during insertion and removal of dentures in restricted mouth opening cases. This case report discusses the successful management of a patient with microstomia due to surgical excision and radiotherapy with thermoplastic flexible dentures.

**KEYWORDS:** Microstomia, Thermoplastic Resin, Retento-grip Tissue Bearing Technique, Injection Moulding Technique
